

GO SOLAR THE SUNFARM WAY!

Interested in going solar but not sure where to start?
We can help! Here are some questions and steps to consider.

1. SET YOUR GOALS

There are many reasons for installing a solar power system. Do you want to transition to sustainable energy? Do you want to save money on your power bill? Do you want to increase the value of your home? Do you want to impress your friends and neighbors? Additional questions to consider include:

- Do you want to produce 100% of your energy needs with solar?
- Do you want to simply offset your consumption?

2. DETERMINE IF YOUR PROPERTY IS SUITED FOR SOLAR

- What is your roof orientation? NSE or W facing?
- What is the condition and age of your roof?
- Are there obstructions that cast shade on your roof?

3. CALCULATE YOUR CURRENT ANNUAL ENERGY CONSUMPTION (kWh)

You can access this information online if you pay your power bill through a portal, or you can get it directly from your utility's customer service line. *kWh = killewatt hour*

4. CONDUCT AN ENERGY AUDIT

An energy audit can show you if your property is as energy efficient as it could be. If not, what can we do to help increase energy efficiency? SunFarm Energy is happy to help you with this step. After all, as we like to say, "it's cheaper to save a watt than produce one!"

5. DETERMINE YOUR BUDGET

Ask yourself how much you are willing to spend on your solar power system. Some questions to consider might include:

- Are you working within a set budget?
- Will you be paying cash?
- Are you seeking financing?

*If you are interested in financing options, we recommend that you get pre-qualified first.
SunFarm Energy offers Zero Down, 100% financing from 1.99% - 3.99%.*

**We are happy to assist you with any of the steps we've outlined above.
We specialize in designing the most efficient systems that are suited to fit your needs.**
