SunFarm Energy is a regionally licensed NABCEP certified solar power contractor. Since 2011, we've made it our mission to help our community make the smart switch to solar power, and we specialize in solar PV and battery backup for your home or business

We are your local solar experts, and we are dedicated to advancing our community's transition to solar power. Come join the future of energy with us.

WHY SUNFARM ENERGY?

Local & Verified

We aren't a large national company trying to make a quick buck — we're your friends and neighbors who live here on the Gulf Coast. We work hard to maintain our reputation for excellent quality and top-notch customer service because that's what you deserve.

Committed to Solar

Solar isn't a passing fad for us, it's the heart of a long-standing commitment to improving our homes, our country, and our environment. We don't rely on high-pressure sales tactics — we educate our clients so they feel empowered to make an informed decision about the right solar PV system for their home or business.

Licensed & Certified

SunFarm Energy holds current licenses in all of the areas we work and stands firmly behind every solar PV system we design and install. We also maintain industry certification through NABCEP, the North American Board of Certified Energy Practitioners. This means we meet or exceed the industry's most rigorous standards.

An Experienced Team

We've embraced the methods and principles of sustainable building and renewable energy for nearly a quarter-century. We've helped hundreds of families, business owners and local organizations in Northwest Florida and Southern Alabama achieve true energy independence.

“Adding solar to my home using SunFarm Energy was one of the best decisions I could have made for my home and family. Amazing experience!”

- Jacey C. in Pensacola FL

HOW CAN SOLAR BENEFIT ME?

Reduce Your Power Bill

Going solar is a great way to reduce your electrical bill. The more energy you produce on your rooftop, the less power you purchase from your utility provider, which means a smaller bill for you and your family.

Gain Energy Independence

When you make the switch to solar power you're taking control of your own energy. By relying less on the grid, you can help make your home more self-sufficient. Plus, adding solar can help create a more resilient grid for everyone. More solar means less stress on transmission lines and grid infrastructure.

Add Value to Your Home

Adding solar can significantly boost the value of your home. Based on research by the Lawrence Berkley National Lab, each watt of solar adds about \$3 to a home's value. That means installing a 5,000 watt system could increase your home's value by about \$18,000.
