

Is your house of worship, school, community center or non-profit organization looking to fund a clean energy project?

Everyone Benefits

Communities & Nonprofits

- ♥ Realize immediate cost savings
- ♥ Reduce their carbon footprint
- ♥ Lock-in low rates for 20+ years
- ♥ Educate & inspire through real-world use of clean energy

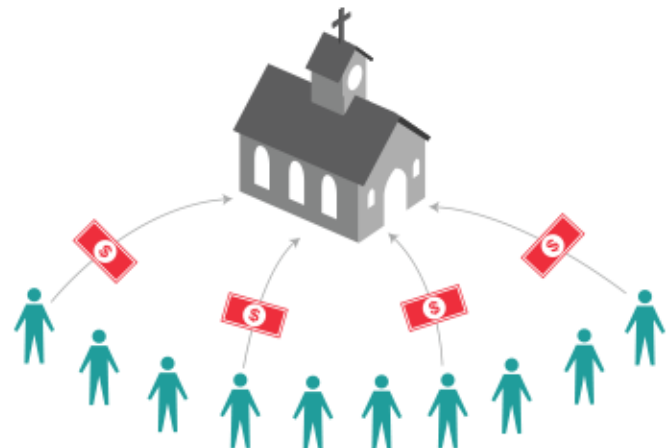

Project Investors

- ♥ Receive steady, long-term returns; on average 3 - 8% IRR
- ♥ Leverage investment tax credits
- ♥ Realize social impact of owning a 100% green asset

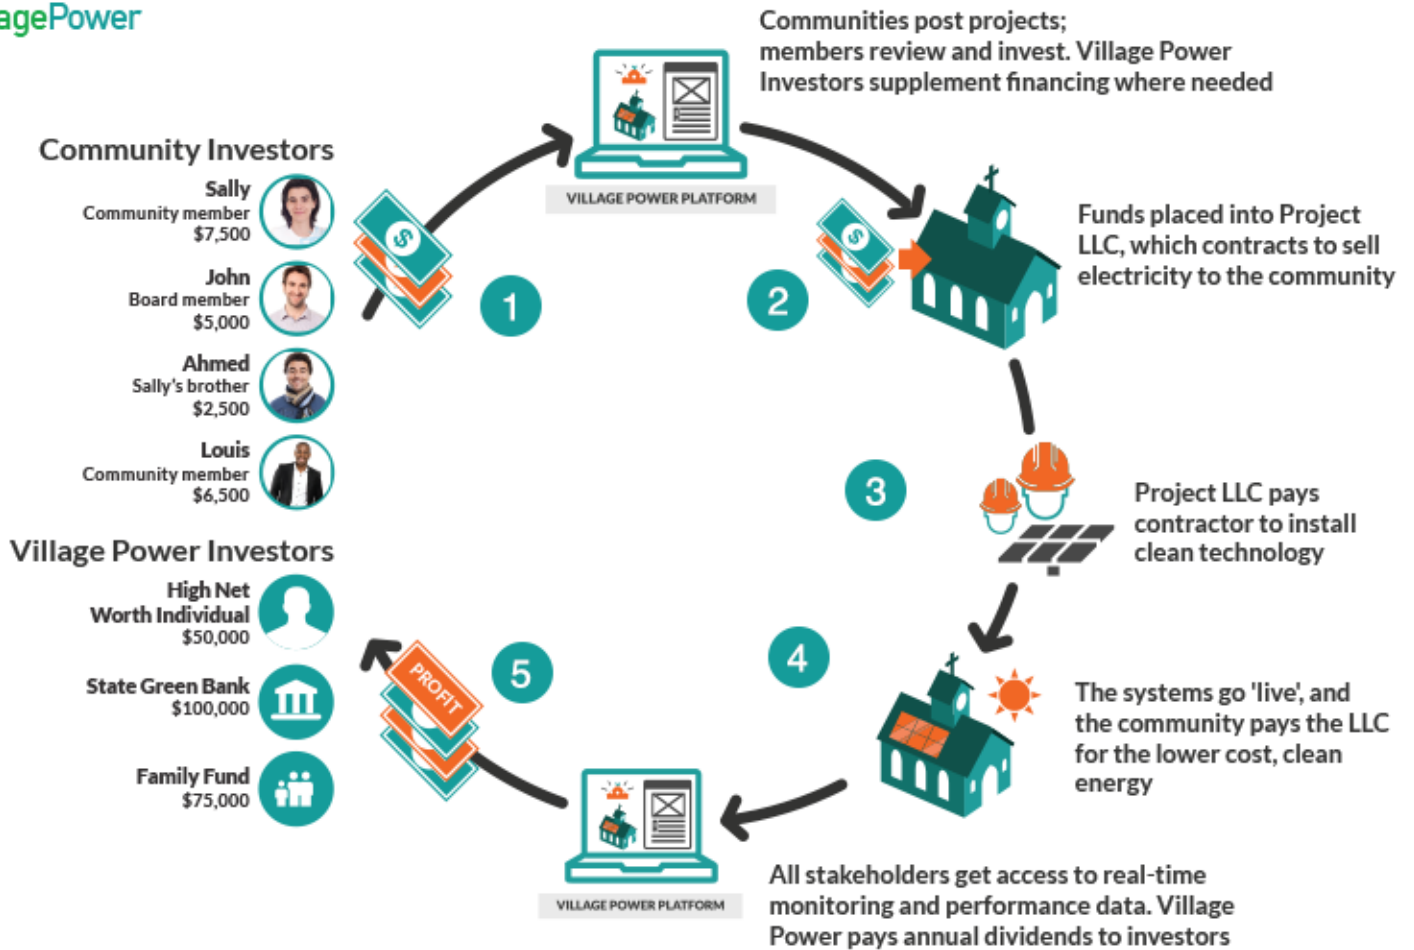

Village Power helps community organizations finance clean energy – **solar power, energy-efficiency and energy storage** – with no upfront cost – through a crowd-funding investment model that gives community members the opportunity to invest and profit.

Our easy-to-use, online development and financing platform enables community members to launch a project, invest, and reap stable, steady returns from a **green asset**, the community's clean energy system.

Organizations benefit directly from clean green energy and reduced electricity costs, while investors can get a steady return and significant tax benefits

HOW DOES VILLAGE POWER WORK?

- 1** A community member ("Champion") initiates a Project on the Village Power Platform. Local, community members pledge to invest. Outside investors (within the Village Power network) supplement community investments, as needed.
- 2** Village Power puts all investments into a Project LLC that owns & operates the community's clean energy facility. The Project LLC enters into a contract - known as a Power Purchase Agreement ("PPA") - to sell electricity to the community at a discount from utility rates.
- 3** Local contractors design and install the clean energy systems and any related upgrades.
- 4** The system(s) go "live", the community's electric bill shrinks immediately.
- 5** Investors are repaid on an annual basis through the organization's regular electricity payments to the Project LLC.

Our Role - Maximizing your energy savings & financial returns

We are your community's clean energy financing partner from beginning to the end. Village Power oversees system installation and provides turnkey asset management, including operations and maintenance, for the entire life of the project.
