

SOLAR PANEL ANALYSIS

Making an Informed Decision

Our Review Process

The products that we offer have been carefully vetted by the Sundance Power Systems Internal Product Review Team and Amicus Solar Cooperative to ensure that they will provide years of reliable performance to our customers, and that we can proudly stand behind our systems.

Setting the Standard for Products We Offer

We evaluate our vendors and products based on the following criteria:

- Performance and quality standards
- Warranties for components
- Electrical and mechanical characteristics
- Cell production process
- Cell types, warranty
- Lab results
- Auditor reports
- Supply agreement terms
- Amicus member company field experience
- Environmental commitment
- Workers rights
- Community impact
- Transparency standards
- General market conditions
- Years in business
- Vertical integration

Amicus + Sundance = Stronger Together

Sundance is a member-owner of the Amicus Solar Cooperative, a purchasing cooperative made up of 43 solar companies from across the U.S. Together, we are able to leverage our collective strength to do the in depth research into the increasing number of solar modules that are coming on to the market and recognize both the value and the risks associated with these modules and the companies that produce them. As a member of Amicus, we are able to leverage our collective buying power to get favorable pricing and secure availability even during volatile times that are frequent in the expanding solar industry.

By joining together with 43 of the best solar companies in the US market we are able to share best practices and business acumen that help us to bring higher value to our customers.

Amicus represents the values of collaboration and community that Sundance was built upon. **We are truly stronger together.**
