

# SYNRG SOLAR

---

At SYNRG Solar, we specialize in clean energy solutions tailored to fit your needs. One of the unique services we offer is our custom installation process for homes with fragile tile such as clay, lightweight concrete, metal or slate. This unique process not only dramatically enhances the weatherproofing protection, but it also provides the most seamless finish possible.

## HERE IS HOW IT'S DONE

---

1. Carefully remove roof tiles from the areas we are installing the solar
2. Remove old underlayment (weatherproofing) down to the plywood
3. Install new underlayment
4. A layer of composite shingle roofing material is added for structural integrity and additional weatherproofing
5. Install the mounting hardware for the solar system
6. Backfill the remaining space with your roofing tile to create a seamless and finish

### BEFORE

New roofing paper with comp shingle

### AFTER

Recessed install for a seamless finish
