

Consult

We will review the system that we have designed based off our recommendation or otherwise and help by guiding you through your decision to go solar.

Ordering

Through our distribution channels, we get the very best deals on nearly *any* solar mod and component. Once 80% of the system is paid for, your solar is paid for and on its way!

Inspections

We coordinate getting the necessary inspections done by the city before the utility switches your meter to unlock net metering.

Monitoring

We set up monitoring and monitor every Spring Solar customer. You can have full-confidence that we are there for you whenever there is a question.

Usage Analysis & System Design

We will make our initial recommendations but if you like we can also show you other options that are available .

Permitting

All necessary engineering of documents & stamping, handled. We apply for the building permit from your city. While this is happening, we apply for your net metering by contacting your utility provider and submitting them the needed info.

Installation

Once your system is ordered, permits are approved & collected we will schedule and install your solar at your convenience. We take great pride in our work, feel free to witness the project come to fruition.

Tax Filing

We want to ensure that you receive the tax incentives associated in going solar so we submit the needed documents for you.

HELOC or self-finance

We can help refer you to a bank or credit union to do a HELOC or you can use your own bank. The choice is up to you. You're not obligated to use your equity and can use funding by other means but a home's equity is a great tool to use for home improvements such as this.

financing provided

We use Loanpal who is the fastest-growing solar lender in the nation. The approval process is quick and easy. Funds for your solar home improvement can be available to start the project same day in some cases.

You Suddenly Understand Something You Understood All Your Life But In A New Way

Traditional Power Means Paying Rent

Stop doing it!

This is ownership vs renting AND saving THOUSANDS by doing it. Take a fixed bill that is guaranteed to pay for itself with money you were already spending every month.

Your Break-Even Time

Rest easy...

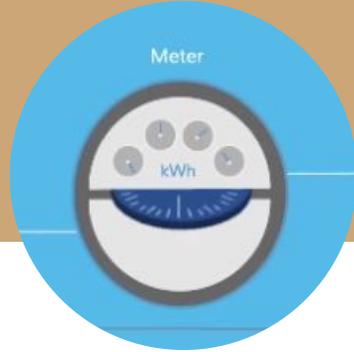

You're just swapping out a bill basically. Spring Solar prices our systems to ensure that our clients have a break-even on their investment of under 10 years.

What is “net metering”?

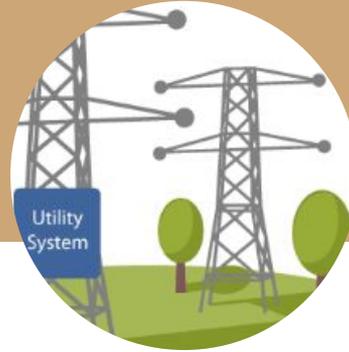

SOLAR

During the day, a solar system produces electricity for immediate use on the home

METER

The energy produced and used is sent and tracked through your bi-directional meter. Any power unused sent out to the grid.

GRID

Upon hitting the grid, the energy your home has produced is used in the immediate neighborhood in most cases.

CREDIT

For each unit of power you've provided to your utility you receive kWh credit. These bank up like roll over minutes for cell phones *but* all year!

Why Spring over Company A or B?

To start off the owner's background is in Finance. Sam graduated at the U of U in Finance, was a financial advisor at Etrade, and Wells Fargo. He was looking for an investment that was paying more than cd's, bonds etc. Since he already owned some real estate rentals, investments in the market like stocks and mutual funds He wanted something that was more hands off and on autopilot and paid well unlike bonds, cd's, savings accounts. They don't pay anything. All of a sudden solar started to pop up and everything had a 25 year warranty, which is very impressive as it's a long time. He got a lot of quotes and they were all very expensive and said "there's got to be a better way, there is NO WAY this costs that much". After searching, meeting and haggling he was able to partner with manufacturers, designers, engineers, installers, etc and was able to get the system installed on his home at a fraction of the cost. Everything went smoothly, so his family members wanted it too and that went smoothly. Neighbors and friends started asking for help too, so he thought, "ok, lets make this a business and mark it up a little bit vs the other guys marking it up a lot, and make this a win/win situation for EVERYONE. Installs started happening and just took off with referrals and we have been doing this for almost 3 years now.

What you're not paying for

A sales company's commission upline, enough for us to retire or any other unneeded "fluff"

We guarantee to be at least 15% less

Against any competitor every single time giving you the highest annual yield possible and best scenario for your hard earned money

Fastest install times

We don't mess around in getting you taken care of by typically having solar installed after initiating the project within a month.

Things To Also Consider As We Discuss...

- Electric Vehicle?
- More Family Members Moving in/out?
- Hot tub?
- How's my roof?
- My HVAC?
- Anything else I could be doing to reduce usage?
- Am I going to move?
- Who else can benefit from this?
- Do I have equity?
- What's stopped me from doing this before?
