

Is a *wind system* right for your home or business?

- > Is your property at least one acre?
- > Does your area have an average wind speed of 10 miles per hour or more?

Is a *solar system* right for your home or business?

- > Do you want to lock in your cost of electricity at rates lower than you are paying now?
- > Do you have clear access facing south on the roof or ground?

We look forward to your call so we can see if a renewable energy system will be a good investment for you and a worthwhile investment for helping keep our planet a livable place for generations to come.

Renewable energy

DC Energy has been installing renewable energy systems since 2005. Two of our most notable projects were the installation of 125 KW of solar for Housing VT on properties owned by the Champlain Housing Trust and the installation of a Northern Power 100 KW wind turbine for Green Mountain Power. Both of these projects enabled many regular citizens to get the economic and environmental benefits of renewable energy.

WE PERFORM A RIGOROUS SITE ANALYSIS SO WE CAN BE CONFIDENT THAT THE RENEWABLE ENERGY SYSTEMS WE SELL AND INSTALL WILL MEET THEIR EXPECTED POWER PRODUCTION.

Incentives for Solar and Wind

Incentives and tax credits for Solar and Wind Systems *have never been better!* Depending on your situation, state incentives in New York and Vermont combined with federal and/or state tax benefits can pay for more than half of the system cost. This brings down the system payback and increases your return on investment!

The Company

DC Energy Innovations is a full service electrical contracting company committed to providing quality renewable energy installations.

Dwayne Cormier, the founder of DC Energy, has been a licensed master electrician since 1993. Ben Gordesky, Renewable Energy Manager, has an environmental resource background and has been working in the renewable energy field since 2006.

At DC Energy, we combine quality installations with excellent customer service to make sure that our customers are satisfied. We are certified in both Vermont and New York to receive all available state renewable energy incentives.
